

Largely under the radar, Tumblr attracts a particular type of users

As a personal brand, Tumblr provides more than enough opportunities to cultivate your image. With the options that are available to you for creating your posts, the sky is the limit. Moreover, Tumblr's main feature, the option to reblog a post, is what is responsible for creating some of its most viral posts. Hence, popularity is easy to achieve on Tumblr if you have the right content, since Tumblr's content distribution mechanism itself is such that you need not worry about much other than crafting your content.

Unlike LinkedIn, Tumblr provides enough options to make sure content is delivered at the time you want it to be. For many blogs trying to cultivate a presence, be it for branding or marketing, the timing of the post makes all the difference. When posting to Tumblr, you have several options. You can share your post right away by clicking the "post" button at the bottom of the post-creation box, or you can click the arrow next to it, which opens a dropdown menu. On the dropdown menu, you will find the rest of your posting options: You can add the post to your queue, schedule it for a later time, save it as a draft if you're not finished with it or post it privately so only you can access it. If you choose to schedule your post, you can then select the date and time you'd like the post to be published.

The queue is a great way to keep your blog active even when you don't have time to post every day. You can set it so that Tumblr automatically posts a certain amount of queued posts during a specific time frame during the day.

A popular feature on Tumblr is that of hashtags, which can help you focus on your target audience, since most users search for posts with specific hashtags. The key to managing your content on Tumblr effectively is to organise

Schedule posts on days that you won't be working. Don't waste any broadcast time.
