

Example:

- `<meta property="og:url" content="http://www.yourdomain.com" />`

5. og:type

This Open Graph is used to describe the type of content you are sharing. It might be a blog post, video, picture, or anything else. The list to choose from is very long. Some of the mostly used examples are:

Web based: Blog, Website, Article,

People: Author, Politician, Actor

Business: Hotel, Restaurant, Company

You can find a list of all the types at <http://ogp.me/#types>

This Open Graph tag is very much important as it determines if your content will show up in a user's interest section of their profile in the event they "Like" it. Generally, you will use the "website" value, as what you are sharing links to a website. Moreover, if you don't even define a type, Facebook will read it as "website" by default.

Example:

- `<meta property="og:type" content="website" />`

For example, the following is the OGP markup for an article on Digit:

- `<html prefix="og: http://ogp.me/ns#">`
- `<head>`
- `<title> iPhone SE performance comparison: The 4-inch flag-`
- `ship contender | Digit.in</title>`
- `<meta property="og:site_name" content="Digit" /><meta`
- `property="og:type" content="article" />`
- `<meta property="og:title" content=" iPhone SE performance`
- `comparison: The 4-inch flagship contender | Digit.in" />`
- `<meta property="og:image" content="http://akmistatic.digit.`
- `in/default/145818f7a0f41b0af6cb0c6003b1672f9e29694d.jpeg"`
- `/><meta property="og:description" content="We pit the`
- `iPhone SE against an iPhone 5s, and the latest generation`
- `flagships like iPhone 6s, Samsung Galaxy S7 Edge and Xiaomi`
- `Mi 5." /><meta property="og:url" content="http://www.digit.`
- `in/mobile-phones/iphone-se-performance-comparison-the-`
- `4-inch-flagship-contender-29806.html" />`
- `...`
