Twitter Cards

Twitter Cards are very much like Facebook's Open Graph tags. Twitter Cards let your tweets stand out from the long list of crowded tweets. Twitter Cards lets you generate some extra content apart from the conventional 140 character tweet. It is designed to give the reader a sneak - peek of the content before clicking browsing your website.

JM Twitter Cards

If you are using Wordpress as a CMS for your website, it would be very easy for you to set up Facebook's Open Graph on your website using the following plugin –

JM Twitter Cards

It might also happen that you are using a custom made CMS for your website or might have a static website. In such a scenario, you will have to explicitly define Twitter card tags in your website's <head> part. We will look into some of the widely used Twitter Card tags below –

1. twitter:card

This Twitter card tag is similar to Open Graph tag og:type. It basically describes the type of content you tend to share. There are 7 types to choose from: summary, photo, video, app, gallery, product and “large image” summary.
