

Example:

- `<meta name="twitter:card" content="Twitter Card type" />`

2. twitter:title

This Twitter Card tag does a similar thing as its OG counterpart. You need to specify the title for your article that it will show up in distinct bold form. It's advisable not to repeat the same text you have in your 140 character tweet. The maximum characters to be used is 70.

Example:

- `<meta name="twitter:title" content="Your awesome Twitter Card title here" />`

3. twitter:description

It is used to describe your content that shows below the 140 character tweet. Like its Open Graph counterpart, it has nothing to do with your SEO. The more compelling is the title, the more number of clicks you can expect. It is highly recommended to keep the character count for the title to be less than 200.

Example:

- `<meta name="twitter:description" content="Your Twitter Card description here" />`

4. twitter:url

Like its Open Graph counterpart, this sets the canonical URL for the content you are sharing.

Example:

- `<meta name="twitter:url" content="http://www.yourdomain.com" />`

5. twitter:image

This tag is used to set the picture to go with your tweet. Generally, you can select from two options - a card with a smaller or a larger picture and the same can be decided through the type tag. For a larger picture, you need to make sure that the image has a resolution of at least 280x150px and that the file size should not exceed 1MB.
