

- ◆ Business Hours
- ◆ Reviews

If you are using Wordpress as a CMS for your website, it would be very easy for you to set up Facebook's Open Graph on your website using the following plugin -

All In One Schema.org Rich Snippets

It might also happen that you are using a custom made CMS for your website or might have a static website. In such a scenario, here is a basic Schema.org example using JSON-LD on your custom website -

```
<script type="application/ld+json">
{
  "@context": "http://schema.org",
  "@type": "YourBusiness",
  "address": {
    "@type": "PostalAddress",
    "addressLocality": "Kalkaji",
    "addressRegion": "New Delhi",
    "postalCode": "110019",
    "streetAddress": "123 Some Lane"
  },
  "description": "This is your business description.",
  "name": "Your Business Name",
  "telephone": "999-000-1111",
  "openingHours": "Mo,Tu,We,Th,Fr 09:00-17:00",
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": "40.75",
    "longitude": "73.98"
  },
  "sameAs" : [ "http://www.facebook.com/your-profile",
    "http://www.twitter.com/your-profile",
    "http://plus.google.com/your-profile" ]
}
</script>
```

With these plugins and CMS tweaks, you can now integrate your social media management strategy right into your website's code.
