

- **Activity Name :** Activity Name is the name of the class that will contain our code. Precisely, we will have a Java Class that is an activity called whatever we name it here.
- **Layout Name :** Android UI Layouts are generally defined in a separate XML text file, not with our Java Code. The Layout Name is what this file will be called.
- **Title :** This is different from Activity Name field and will be used by Android on the device's screen as the name of the App.

As a first android project, we can go ahead with the default values and click Finish.

Android Studio will start building your project.

3. Building Your First Android App

Android Studio would take this a few moments to do a few background operations and create the project. After Android Studio is done building
