

to create libs subdirectory inside each of the module's directory and copy the respective libraries into them.

## 8.4 Manifest file

If you are to develop a Cardboard App for Android, you will have to declare certain permissions the application must have, in the Android Manifest file, in order to access the API and interact with the cardboard.

```
<manifest ...
  <uses-permission android:name="android.permission.NFC" />
  <uses-permission android:name="android.permis-
sion.READ_EXTERNAL_STORAGE" />
  <uses-sdk android:minSdkVersion="16" android:targetSdkVersion="23"/>
  <uses-feature android:glEsVersion="0x00020000"
android:required="true" />
  <application
    ...
    <activity
      android:name=".MainActivity"
      android:screenOrientation="landscape">
        ...

      <intent-filter>
        <action android:name="android.intent.action.MAIN" />
        <category android:name="android.intent.category.LAUNCHER" />
        <category android:name="com.google.
intent.category.CARDBOARD" />
      </intent-filter>
    </activity>
  </application>
</manifest>
```

Note the following:

- `<uses-sdk android:minSdkVersion="16"/>` declares that the user's device must be running API Level 16 (Jellybean) or higher. It is mandatory for devices to run on Jellybean to be able to run Cardboard Apps.
- `<uses-sdk android:targetSdkVersion="23"/>` declares that the particular app is targeted for devices with API Level 23 (Marshmallow).
