

Apple's guidelines are to be strictly followed to ensure quality standards on the App store

tion, and you can always go to the website and read the fineprint to clear up any other doubts you may have. And considering some specific points vary according to your target platform, make sure to read up on Apple's specific guidelines for each platform.

A few overarching points should be kept in mind. Considering the App Store's exclusivity, any sort of repeated content makes it less likely for your app to make it to the store. Apple is known to keep up high standards of quality, and the content presently available in the Store is a clear indicator of the level of originality and creativity needed for an App to make it to the store. In addition, due to the App Store's popularity with young children, Apple makes it very clear that any obscene, vulgar or pornographic content should not make its way to your app, else you're on your way to a clear rejection. Apple also expects very strict adherence to its visual design guidelines. Apps not falling in line with minimum control sizes, clear layout formatting, minimum text sizes etc also have a high probability of getting rejected. More on that later though. And lastly, any attempt to plagiarise code and steal user data without their permission also qualifies as a strict no-no.

In short, all points under the "Safety" category point to one main thing: any content that is aimed at shocking or provoking audiences is not going to pass the App Store review. Racially insensitive or defamatory content about people based on gender, religion, sexual orientation or such is bound to have you kicked out. Apart from any overtly sexual or pornographic material, any content depicting and promoting the use of violence and weapons is also an issue. For any app using social networks and user-generated content, clear
