

be clearly aligned. For more detailed instructions and additional design resources, visit Apple's Developers page dedicated to design.

The one point that Apple cannot seem to emphasize enough is privacy. In it's "Legal" section, Apple lays out a series of clear instructions and restrictions to make sure user privacy is not violated, and user data is not collected surreptitiously and without user permission. To make sure you're on the right side of the law and not breaking any rules, it would be wise to consult a lawyer in the case your app needs access to sensitive user data or uses such data in any form. In a nutshell, any apps that transmit someone's personal data without first obtaining their permission and providing access to information about how and where the data will be used, or use/disclose to third parties data gathered in the health, fitness, and medical research context will be immediately rejected. In addition, Make sure your app only includes content that you created or that you have a license to use. Violation of intellectual property laws can result in further legal problems, apart from immediate rejection from the app store.

Ultimately, it is the developer's prerogative to make sure all rules are followed and no laws are broken – failure to do so is solely the developer's responsibility, and Apple makes it clear it will take no share of the blame. If you feel you've followed all the prerequisite laws and requirements, there is no reason your app would not pass. Once you've submitted your app for review, you can view its status in the My Apps section of iTunes Connect or on the iTunes Connect App for iPhone and iPad. Review times may vary by app. According to Apple, "on average, 50% of apps are reviewed in 24 hours and over 90% are reviewed in 48 hours. If your submission is incomplete, review times may be further delayed or your app may be rejected." Keeping this in mind, you shouldn't be alarmed if you don't hear for atleast a day. Every developer receives an e-mail regarding the acceptance/rejection of their app, and in the case you feel there has been some sort of misunderstanding and your app has been wrongfully rejected, visit Apple's Resolution Center to appeal to the App Review Board.

Seeing as how the process of publishing apps to the App Center is an arduous one, don't lose hope and keep up with the efforts!
