.appspot.com/" />
```

Each feed starts off with a declaration and then proceeds to provide metadata. We are interested in the stored data which is encapsulated within the <item> tags. Here's a sample of the same.

```
<item>  
• <title>Bentley created a 53000 MP photo exhibit attention  
to detail</title>  
  
• <link>http://feedproxy.google.com/~r/digit/latest-news/~3/  
GM5WZS56wyQ/this-53000-megapixel-photo-of-the-bentley-  
mulssane-is-all-about-attention-to-detail-30772.html</link>  
  
• <:description>&#x2Fstatic.digit.in/default/  
thumb_64052_default_td_300.jpeg&#x26;amp;nbsp;Zooming into photos usually shows you how well the details  
have been captured. Well, the photo of the Bentley Mulsanne  
above, is possibly the most detailed photo you&#x27ll  
ever see. Bentley used te...&#x2Ffeeds.feed-

For keeping this first app simple, we are only going to be playing with two elements from each item – the title of the post which is encapsulated within `<title>` and the hyperlink to the article which is encapsulated within `<link>`.
