

Now, after you've made your app in Xcode you should open and check the Identity section and Xcode will warn us that we cannot run our app on a device. This is because Xcode could not find a code signing identity and the Team is set to None. Signing in with your Apple ID should fix this.

Configuring the Project

Navigate to Preferences... and click on the Accounts tab.

You'll probably see the image above with no Apple IDs. Click on the (+) sign on the bottom left and choose 'Add AppleID...'

Enter your Apple ID and then click on Add. Hopefully, you're already approved to be an Apple Developer and your ID gets added to Xcode. Your ID should now appear in the panel on the left.
