

You'll be greeted with a window listing all the platforms you can develop for using Apple's Developer Program. However, we are only concerned with iOS at the moment. Under the iOS panel, select Certificates.

You can add a certificate to your ID by clicking on the (+) on the top right. You'll be presented a set of options, select iOS App Development and click on continue.

You'll be prompted to create a CSR but you've already done that so click on continue and you'll be asked to upload your CSR file. Do so and click on Generate.
