

## Creating an App ID

With millions of apps available on the App Store, you need a way to locate apps easily. For us humans, we can make do with the name but for the App Store you need to make it a lot easier. The App ID is just that. A unique identifier for apps. Navigate back to the Apple Developer website and get to the Certificates, Identifiers & Profiles page. Click on iOS apps and select App IDs. And as usual, click on the (+) in the top right corner to add a new App ID. Give your App a name, provide an App ID prefix and select Explicit App ID. Use reverse domain name notation for your App ID. It helps keep things organised.
