

the implementation is very easy. You just need to call import Colors and add codes like as shown below

- `println("mark".blue)`
- `println("mark".blue.underline)`
- `println("mark".blue.bold + "david".brown)`

UIImageColors

UIImageColors is an iTunes style color grabber for UIImage, which fetches the most attractive and prominent colors. To work with the extension, you need to make use of UIImage() method, which accepts an image name as a parameter. You should then apply getColors() method to perform the required work.

MPMoviePlayerController-Subtitles

MPMoviePlayerController-Subtitles work similar to that of AVPlayerView and is mainly used to display subtitles on iOS. You need to make use of the following statement in the beginning of the code.

- `import MPMoviePlayerControllerSubtitles`

You then need to call mainBundle() method and provide the required parameters.
