

Step one is to register as an Apple developer at the App store. We have covered this in Chapter 2, including the process to enroll into the Apple iOS Developer Program. Becoming an Apple developer is not the same as becoming an iOS developer. Becoming an Apple developer is free while becoming an iOS developer will cost you US\$99.

The next step is to join the iOS Developer Program. In order to enroll into Apple's iOS dev program you'll need to pay a fee of US\$99 per annum. Doing so will allow you to be able to send apps to the App Store and give you access to certain associated portals.

In order to join the iOS developer program you'll need to head to the Development Member Center once you're logged in as an Apple developer. Once there you need to click on the "Join Today" link which can be found on the right side of the page.

You're greeted with an introductory page which is followed by a page where you're asked if you're a new or registered Apple developer. Select existing developer who would like to enroll and proceed onward.

The following page will ask you whether you want to enroll as an individual or a company. It should be noted that the process is easier when enrolling as an individual than when compared to enrolling as a company. If you wish to enroll as a company it will be more of a hassle and require more paperwork but be sure to go through the requirements and instructions if you choose to do so.

For the purposes of this tutorial we shall continue with the Individual option. This will immediately lead you to a page where you'll need to once again provide your credentials. Click on "Sign In" once you're done filling the form.

The next step will be to enter your billing information. This is needed in order to confirm your identity. Make sure you enter your details correctly, as Apple will attempt to confirm with your credit company. Once you're done filling all fields go ahead and continue.

Next, it's time to select a program. You have three choices: The Mac Developer Program, the Safari Developer Program and the iOS Developer Program. For the purposes of this tutorial we're going to go ahead with the iOS Developer program.

Once you've decided on your program and clicked on "Continue" you'll be able to review all of your information once again, so go through all of it and fix any mistakes that you might have made. If you're all done, and ready to submit, continue.
