

You'll be greeted with yet another license agreement so make sure you go through it carefully, once you're done check the box and click on "I Agree".

The next step is to purchase the program, which will take you to Apple's Online Store. You simply need to click on the "Add to cart" option. Followed by the "Check Out Now" option which you'll find on the following page. You'll need to once again log in, for which you'll need that Apple ID you just created.

Apple requires you to enter a shipping address. Don't worry though, they won't ship you anything. You should preferably use the same address you used which filling in your credit card details.

You'll need to once again fill in your billing information and credit card number in the following pages. The next page will show you any estimated sales tax that you may be charged. If everything checks out, click on "Place Order Now" and you're done!

After you've finished paying for the iOS Developer Program and finished registering, it might take Apple a while to process your order.

Eventually you'll receive a mail from Apple thanking you for joining the developer program. You should also receive a mail mentioning that you now have access to iTunes Connect.

Now would be the time for you to download Xcode, which is the main iOS development tool. You can do so using your new iOS developer credentials.

For the next step, go the iOS Dev Center and log in. Once in, you'll be greeted with a boatload of information. From programming guides, to documentations, and videos. You should familiarise yourself with what's available. Also, be aware that some information might be confidential.
