

It takes a little time for Apple to generate the file for you, but you can check the “Development” tab in the Provisioning section shortly to check whether your status has been updated to active. If it has a download button will appear.

Don’t download the file just yet. Let’s generate the distribution profile first. It won’t be needed till much later, until the app is ready for submission, but you might as well get it out of the way since you’re already here.

Go to the “Distribution” tab in the “Provisioning” section and choose “App Store” as the distribution method. Choose your app ID and “Submit”. We won’t be touching Ad Hoc distribution.

Once your provisioning profile is ready, go back to the “Development” tab and download and save the file. Do the same with your distribution profile as well, this time from the “Distribution” tab.
