

You need to point Xcode to the provisioning profiles. Under the “Build Settings” search for the word “signing.” Choose the correct provisioning profiles from among the ones shown to you by Xcode.

Choose developer profile for the Debug builds, and distribution profile for Release builds. Before you began building, choose to build using the scheme chooser. This way when you use CMD-B to build the project, if there any problems with your profile it'll show up.

You can check the problem on the log navigator, once you've identified the problem, you can fix the issue and proceed to build again. Now you connect your device to your computer and hit CMD-R to run the app which will launch shortly on your device. For submitting your project to Apple, you'll need to log into iTunes Connect. You can login with your iOS Developer credentials. If this is the first time you're logging in you'll have to accept the Terms of Service.

There are a lot of things you can do on iTunes Connect. A LOT. But we'll keep it to a minimum. For starters, if you want to get paid for your apps, there's a lot paperwork involved, so to speak. So you better get all of it out of the way right away. This is something that you'll have to endure if you want to make any money off of your app, so muscle through it.

However, if you intend to have your apps be free, you can skip this and get right to the app submission part.

For paid apps, click on “Contracts, Tax and Banking”. Here you'll have to electronically sign two contracts. One is for your apps, and the other is for iAds. After this click “Request”. You'll be met with more legal terms
