

to be available. However, note that in this case the app will not be available by the selected date if it hasn't been approved by Apple. And finally, you can choose to have the release happen once the app has been approved. In this case you may as well set the year to next year and a date far enough in the future. You can come back and change it in the future.

Next you choose the price tier for your app, or indicate whether your app will be free or not. You can check whether the app will be offered at discounted prices for educational institutions when ordered in bulk.

Once you've decided click "Continue".

Now set the version number which should be the same as in your app's Xcode project. Fill out the description which will be seen by users at the App Store and decide on the appropriate category for your app.

Next is an important step, deciding on the keywords. These are very important as the app's name and keywords are indexed in iTunes' search engine. This can only be changed when you update the app, so brainstorm a bit before deciding on the keywords.

Next you fill out the copyright notice, which generally has just your name, the company name, the contact email, and affiliated websites.

Review Notes are used for details about your app that you'd want a reviewer to know about. This is where you mention any details about the app such as the need to sign up at a website or the need for any special hardware. Scroll down and fill in the required information and determine a rating for your app. Reviewers can make changes to this section if they don't agree with your score, so try to keep it honest.

Once you're done with that scroll down some more and submit your graphic assets. This is where you upload your app's icon and the screenshots. If it's a universal app you'll need screenshots for both the iPhone and the iPad. Once you've uploaded and checked the order of the screenshots click on "Save".
