

in files with a “.aspx” extension; these files typically contain static (X) HTML markup or component markup. The component markup can include server-side Web Controls and User Controls that have been defined in the framework or the web page.

Databases:

Any dynamic website that needs to manipulate data would require integration with a database software. The most popular databases in the world operate on a relational model, and are hence called relational databases. Virtually all relational database systems use SQL (Structured Query Language) as the language for querying and maintaining the database. Oracle Database (commonly referred to as Oracle RDBMS or simply as Oracle) is an object-relational database management system, which is also the most widely used RDBMS in the world, followed by MySQL.
