

an iPhone, nonetheless, there are a bunch of things you should do to ensure your complete and wholesome security. Your iPhone is a gateway to your world of personal information and details that should remain private at all costs. And although you have a fingerprint lock on your iPhone, doesn't mean that hackers won't try just about anything to break into it. We are just saying that the fact that it can be done is reason enough for some people to try and do it. So follow these instructions religiously and the safety of your beloved iPhone is guaranteed.

Apple security policy

Apple System security is designed so that both software and hardware are secure across all core components of every iOS device. This includes the boot-up process, software updates, and Secure Enclave. This architecture is central to security in iOS, and never gets in the way of device usability. Needless to say, Apple lays huge stress on securing the 'world's best phone'. They were the first to popularize the use of the fingerprint scanner on their home button. And the feature works pretty seamlessly and has become a commonplace practice, giving the iPhone another layer of protection after the security password.

Apple also has a separate 'for Apple product owners only' store called the iStore, which you can access with your Apple ID. And most of the better applications you find on Google Play Store, you are likely to find an even refined version here on iStore. Also, Apple has a very strict application

Apple likes to believe that they have built a Fort Knox when they sell their iPhones
