

Just about every need you may encounter is addressed with one software or the other with which Tails come. A customized browser that uses the Tor network is a case in point. Also, in Tails Firefox includes other extensions to make browsing extra-secure with *HTTPS Everywhere* and *NoScript*.

LPS

Lightweight Portable Security or LPS is another feasible option. The distribution, in fact, is maintained by the American Air Force. LPS is also kind of unique for the fact that it has a very minimalistic approach. The hardened code aside, it has a lightweight desktop environment which is akin to Windows XP. The environment includes Firefox and some additional tools. You also get to use what's called as an "Encryption Wizard" that will help you gain more privacy and security, and which is easy to use.

As with Tails, LPS too runs only in a live environment. And yes, it doesn't leave traces once you shut down or restart.

Minimal but secure

The common Ubuntu distribution

Just because something is all too common doesn't necessarily mean that
