

Social media is where it's all at right now. The most happening places on the Internet are social media sites. So it comes as no surprise that for most of us, social media sites are pretty much our second homes. So naturally, when so much is happening on one platform, it's very likely that someone or the other would take this opportunity to snag some sensitive information out of you, and in most cases you won't even realise you've lost that sensitive info which could result in financial losses for you, among other things.

In order to prevent such a thing from happening, you would do well to adopt certain methods to secure your social media accounts. Here's what you need to know to do that.

Enable two-factor authentication

Two-factor authentication has been around for a while but it's only been of late that folks seem to have woken up to its use. Well, better late than never, we say.

Simply put, it asks you to enter a secondary bit of information so that you can access your account. This means that even if a password or PIN is stolen, your data security isn't compromised.

In fact, two-factor authentication is way more secure than passwords. As per experts, many a high-profile hack, including the one where Twitter accounts of many media accounts in the US were hacked in 2015 wouldn't have happened if a two-factor authentication was in place. The reason is that even if a malware is placed on a system and the password is stolen, a breach is still not possible.

Two-factor doubles the security
