

• Web browser proxies

Web browser proxies don't encrypt your complete internet connection but only whatever goes in and out of your Web browser. There are a number of websites online that keep a list of active proxy servers which you can use with your browser. Hidemyass and ProxyNova are two such sites which have a long dedicated list of active proxy servers, with each proxy's speed, level of anonymity and country of origin listed. Choose one from these and set up your browser to use the same.

PureVPN ranks among the best paid proxy services. It is also one of the fastest and most secure VPNs out there.

To use a Web browser proxy, do the following in your browser:

- **Firefox:** Tools > Options > Advanced > Network > Connection > Settings
- **Google Chrome:** Options > Settings > advanced settings > change proxy settings
- **Internet explorer:** Tools > internet options > Connections tab > LAN settings > Use a proxy server

Once there, enter the port number and the IP address of the proxy server

Proxy IP	Proxy Port	Last Update	Proxy Speed	Uptime	Proxy Owner	Anonymity	New Proxy
115.111.808.144	8080	✓ 25 hours ago	1440 (24%)	100%	India	High	75546
