

you are going to use. If the proxy requires a SOCKS connection, go to the advanced option and enter the settings.

Cloud storage

Looking for the most secure way to share your files over the internet? There are a number of cloud services available in the market. Almost all of them provide its users with some free storage. But which one do you choose when you not only want to protect your data from hackers but also be sure that not only hackers but also the company that is offering you the service doesn't rat you out? SpiderOak and Wuaka are your top two choices. SpiderOak offers you 2GB free after which you can buy each additional 100GB for \$10 a month while Wuaka gives you 5GB for free after which

SpiderOak prides itself in having "Zero Knowledge" about your data

you can get 100GB for \$12 per month. What these services offer and their more popular counterparts – Google Drive and Dropbox – don't is, that they locally encrypt your file and then upload them. This makes sure that even the companies and their employees themselves cannot access the files they have stored on their servers.

You can also add an extra layer of security by encrypting the files before uploading and sharing them. There are a number of software out there which can do this like 7-Zip. Follow these steps to encrypt your files using 7-Zip:

1. Download and install the software from its official site (www.7-zip.org).
2. Select the file(s) you want to encrypt and right click
