

- Silent Text is one half of the *Silent Circle* software package that lets you send secure, encrypted voice, video and text communication. The software comes at a price of \$12 per month and is one of the best in the market
- TextSecure for android and Signal for iOS are a pair of secure SMS / IM applications by the company WhisperSystems. TextSecure integrates with your default android messaging application and automatically encrypts the message you send to another TextSecure user. Signal, the iOS application, does not integrate with the system like its android counterpart does, but works the exact same way. Also the two apps can be used to securely communicate with each other. Both the applications are freely available on Google play Store and iOS app store.
- Telegram is another good option for people looking to securely communicate with their friends and families. The creator of the application describes it as “WhatsApp but encrypted, cloud based and faster”. The application has also the features that a good IM app has like sharing media, and messaging upto 200 people at once, but it is its security features that set it apart. The application not only uses end to end encryption making your communication safe and secure, but also has a secret chats feature that leaves no trace of your communication on the Telegram servers. You can also set a time for automatic deletion of your messages.

Call

The Edward Snowden leak brought NSA’s infamous PRISM program to the limelight, making the world realise the extent of invasion of privacy that governments have been involved in. So how does one make a phone call without being afraid that each and every word that you are saying isn’t being recorded somewhere? Simple. Use one of the following applications:

- **Redphone (Android only)** - An application by the same WhisperSystems who developed TextSecure and Signal, Redphone let’s make you free encrypted calls through your android phone over the internet. The application encrypts everything from your data to the metadata attached to your call, shutting out everyone trying to eavesdrop on the conversation, be it the government or a hacker.
- **Silent Phone (iOS and Android)** - The paid application lets you make secure and encrypted phone calls between android and iOS too. Also,
