

the Silent Phone user can call non-users with it, where only one side of the conversation will be encrypted.

- **Ostel (iOS and android)** - Another paid application, Ostel uses Open Secure Telephony Network to make encrypted calls across platforms. All you have to do is create an account on Ostel.co and download the application for your device (CSipSimple for Android, Groundwire for

Ostel lets you make secure and encrypted phone calls between android and iOS

iOS and PrivateGSM for Blackberry and Nokia for those who still use them). Once downloaded you are all set to make secure encrypted calls to other Ostel users.

Video conferencing

Microsoft's Skype and Google hangout, two of the most used video conferencing tools, both encrypt your communication making it safe from prying hackers. But your whole communication goes through the servers of the companies where they are also logged and stored. This information in some cases could be revealed to the government agencies.

The best and most secure video conferencing tool out there right now is Bitmessage – a complete email suite. Based in part on the 'bitcoin principle', the service encrypts all its communication data and metadata, and can also
