

IDrive although doesn't provide unlimited backup, but it does come with extensive amount of features and customization, though they might become too confusing at times. It also allows creation of backup sets to ease management of your backups. IDrive allows automatic sync and even file sharing.

Pricing:

- Free - \$0.00/Year - 5GB
- Personal - US \$69.50/Year - 1TB
- Personal - US \$139.00/2 Years - 1TB
- Personal - US \$499.50/Year - 10TB
- Personal - US \$749.25/2 Years - 10TB

Crashplan provides unlimited cloud backup. In fact, it's considered truly unlimited. Apart from all the data, it backs up every version and even every deleted file. It supports hardware backups like from a NAS. You are also given full control of your keys. The only major setback is the transfer speeds, for large scale backups, the service takes hours to both upload and restore the data. A point to be noted here is that free service only allows managing of local and offsite backup with 30-day trial of online backup.

Pricing:

- Free - US \$0.00/Month
- Individual - US \$5.00/Month
- Family - US \$12.50/Month (multiple users)
- Work - Customizable (multiple users)

Storage has been an integral part of our society since we learned to procure things. Now we can even make digital copies of almost everything. The advancement of internet has truly boosted our ways of storing information. Although with this advancement came the risk of cyber thefts, thankfully we're not hopelessly vulnerable. Prevention, another integral part of us, gave rise to encryption and other forms of digital security. It's time we embrace them.
