

The phone connector family, classified by size

and auxiliary cables and therefore are found in almost everything which is capable of producing sound.

2.5 mm ones are the rarest amongst the three. They do the same jobs as the 3.5 mm in audio space with the advantage of being smaller and disadvantage of being weaker.

TS, TRS, TRRS and more

The second classification which divides phone connectors is the cable type. TS or Tip-Sleeve connector works with an unbalanced connection, tip carries the signal and the sleeve takes the ground. TRS or Tip-Ring-Sleeve connector works with the balanced cable, tip and ring carry the signal and the sleeve takes the ground again. TRRS or Tip-Ring-Ring-Sleeve is for a balanced cable which also carries a microphone signal. The extra ring or the sleeve carries this signal.

RCA Connectors
