

In this chapter, we will explore the reasons why a cool sounding technology like home automation is emerging by having a look at some of the trends that have been supporting the wider adoption of home automation. Then we will have a look at how technological development has made it possible to easily adopt home automation. Lastly, we will have a look at the advantages of automating a home.

Some statistics and human habits

Less than 25,000 cars were sold in India every month prior to the year 1995. Today in 2016, more than 2 lakh cars are sold in India every month. What was it that led to this stupendous increase in car purchases?

Let's bring cell phones into the picture. The first cell phone call was made in India on July 31st 1995. There were only 50 lakh subscribers in the first six years. Also, the call tariff back then was ₹16 per minute. As of May 2016, India has 103.32 crore mobile subscribers.

What do you say about smartphone? Considering that the smartphone revolution started in the year 2007-2008, the fact that India has 22 crore

Smartphones and feature phones were the fastest to be adopted world-wide
