

Smartphone and feature phone statistics

smartphone users as of February 2016, is among the fastest things to grow as far as adoption of technology is concerned.

There are some important factors that drive the adoption of technology like affordability, need and simplicity of use.

But is home automation affordable, necessary and simple?

That's a tough question to answer. Let's try to analyse it in parts.

Simplicity:

As of now, it is possible to use simple automation for simple needs and it is also possible to increase automation to an incredibly complex level as is done for the assembly lines. But as the complexity of automation logic increases, automation gets more difficult. And reducing the complexity is an ongoing process that will evolve with time.

Though many home automation systems are easy to use, installing them is not an easy job but you can always rely on experts to install and provide a ready to use a home automation system. Some houses do come with such home automation systems pre-installed.

Necessity:

We spend a lot of time at our home, using various devices. By automating our
