

Considering one of the most popular hubs in the market is the SmartThings Hub, the best possible sensor that would be compatible with it is the Samsung SmartThings Motion Sensor. On programming your hub to trigger lights to automatically turn on when you enter a room or turn off when there's no motion for a specified length of time, you can optimise your lights to respond to the presence of people. And since the SmartThings hub allows you to switch your lights on and off according to the sunset and sunrise timings, you can optimise your energy consumption for efficiency. So while you have the option to use the Motion Sensor, that retails for ₹2700, you can also use the Samsung SmartThings Multipurpose Sensor, selling for ₹5000, that acts as a movement, vibration, orientation and temperature sensor. So, in addition to responding to the presence of people in a room, you can also program your lights to switch on when certain doors/windows are opened.

Another option compatible with SmartThings and other Z-Wave compatible controllers is the Ecolink Z-Wave PIR Motion Detector, that is popular for being pet immune, thus reducing the chance of false alarms. This product is on the market for around ₹2100, so it's a much cheaper alternative to the other two.

If you've already got a set of preinstalled Philip Hue lights and want to use motion sensors with those, you can use the recently launched Philips motion sensors, available for around ₹4000. Packed with the regular fea-
