

them talk to each other. That would eliminate the need for you to, say, open the garage door when your car approached it or shut the windows when it gets a little chilly.

Who wouldn't want to live in such a house? And the good news is, you can have such a house. You can make your house into a 'smart house' by just installing some clever equipment and making a few subtle changes here and there.

Setting up a Home Security System

1. Hub

To set up a smart home security system, firstly, we need a hub. This is the virtual admin we talked about earlier. All the nodes and devices would be connected to this hub. Take the example of the Samsung Smart Things Hub. It supports wireless protocols and is compatible with a lot of devices. For the DIY enthusiasts, you could basically connect a large variety of devices in infinite arrangements to solve any given problem and for any purpose.

2. Components

You set up the Hub, now you need all the components to make an interconnected network. Best examples of such components are thermostats, CCTV wireless cameras, Wi-Fi lights, Wi-Fi alarm systems, etc. Take the example of the Honeywell Smart Thermostat. You can program it to increase or decrease the temperature on the basis of the outside temperature.

Soon everything will be connected
