

Wink Hub 2

Wink is a company that sells a variety of home automation products including smart alarm systems, locks and thermostats. The company came up with its first smart hub in the year 2014. This device could not only control all its devices but also smart devices from various other companies. The Wink Hub was a decent device which did what it said but had its fair share of drawbacks which included compatibility with only 2.4 GHz Wi-Fi and frequent problem while connecting to smart devices from other manufacturers.

The Wink Hub 2 rectifies all these and bring even more to the table making it a tough competitor to the Samsung SmartThings. Wink Hub is not only compatible with Z-Wave, ZigBee, Bluetooth LE and Wi-Fi but also supports other lesser known and used standards like Kidde and Lutron ClearConnect, which are slowly gaining popularity. So, you don't have to worry about the device going obsolete.

Like SmartThings the Wink Hub 2 lets you automate and interconnect your smart devices based on their 'actions' using a nifty feature called 'Robots'. With it you can do things like setting up your smart home such that all the lights are turned on if the motion sensor detects a movement at night or set the temperature of the room to your sleeping temperature as soon as your bedroom lights are turned off. Unlike SmartThings, which needs to be connected via an Ethernet cable to your home network, the Wink Hub connects wirelessly to it, making it easier to carry around and place it in the location with best reception. It lets you pair devices quickly by scanning their barcodes. Its mobile applications are intuitive and easy to use with an option for some devices like the Nest Learning Thermostat, to directly connect with the application on your smartphone via the internet without the need of the hub. Though, the application is limited in terms of the extent to which you can control other smart devices and offers only basic control features for most of the non-Wink devices.

Wink Hub 2 is compatible with maximum number of communication standards out there.

Logitech Harmony Home Companion

The Harmony Home Companion is a smart hub + Universal Remote combo offered by Logitech. The hub and remote are said to be compatible with
