

HVACs

Nifty devices that create a comfortable, controlled habitat for you to live in.

We all need shelter to survive. A safe place which protects you from the heat when the sun is out, and gives you warmth during those cold unforgiving nights.

This is what the primary purpose of your house, smart or otherwise, should be. And HVACs (Heating, Ventilation and Air Conditioning Systems) are what make any house comfortable to live in. They are also the most power hungry part of any home's power consumption. HVAC basically comprises of a connected system of various devices which include heaters, air conditioners, vents and thermostats, that lets you control and maintain the temperature and environment.
