

Ecobee 3's mobile app is intuitive, easy to use and lets you control the device from anywhere in the world.

Ecobee 3 smart Wi-Fi Thermostat

The Wi-Fi enabled smart thermostat by Ecobee is another good option and a tough rival to the Nest device. The touchscreen device comes with a remote sensor which helps it control the temperature of the house room by room. Ecobee 3 lets you divide your house into different zones, each with its own temperature settings and timers.

Like the Nest device, it also monitors your activity and habits and learns from it. With time, it will automatically adjust the temperature of the room based on whether you are reading or sleeping.

The mobile app lets you control the device, access lots of data including the average temperature of the house and the number of people in it, and comes equipped with vast customisation options.

The Ecobee 3 is easy to setup on your own, is compatible with several other smart devices including the Echo, Smart-Things and Wink, and supports Apple's HomeKit.

The Ecobee 3 touchscreen display lets you access and control all its features
