

Pepper

Pepper is a smart robot which can identify the four basic emotions such as joy, sadness, anger and surprise. The robot can also interpret a smile, a frown or your own tone of voice. The main purpose behind the development of Pepper is to make interaction with human beings as natural and intuitive as possible. Pepper features 4 directional microphones located on the head, 3D camera and two HD cameras to easily identify movements and recognize the emotions on your face. Since Pepper is directly connected to the web, you will be able to stay updated on the weather and latest news. The three multi-directional wheels integrated with the Pepper facilitates easy movements at 360-degrees with a maximum speed of 3 km/h. The Pepper robot also includes several sensors. Moreover, you can participate in the development of content for the robot.
