Jibo

Jibo automatically recognizes and tracks faces and has the ability to capture photos and activate video calling via two high resolution cameras. The product features a 360-degree microphone and natural language processing system to enable you to talk to Jibo from anywhere inside your home or office. You can keep in touch with Jibo using hands-free reminders and messages generated by the system. Jibo leverages Artificial Intelligence algorithms to deeply understand your taste and preferences. This will enable you to sync effectively with the robot.

In addition to adults, the Jibo robot will be very useful for kids since it makes use of movement, animation, and sound to delight them during the learning process. The company also provides Software Development Kit (SDK) to enable engineers to create new content for Jibo.
