

switches, and outlets including thermostats. By making effective use of advanced AI algorithms paired with all the connected gadgets, you will be able to keep your home secured. Moreover, the personal robot developed by Autonomous has the capability to slash your energy bills to a large extent.

The robot can perform a wide range of tasks. For instance, you can set the temperature to a specific degree, make coffee, turn on lights. Moreover, the robot has the ability to open the terrace door and even order dinner. The product also keeps track of your calorie count. The robot can also trigger a phone call to your cab service as soon as you leave office.
