Roomba

Roomba automatically cleans floors at the push of a button through vacuuming. The product makes use of a highly efficient cleaning pattern via iAdapt 2.0 navigation. It employs a wide range of sensors to map to the real-world clutter and furniture located inside the house. The latest release of the Roomba employs proprietary vSLAM technology to enable visual landmarks in its map. The Roomba robot vacuum has the capability to run continuously for up to two hours. After that it automatically recharges and resumes cleaning to finish the remaining work.

Xiaomi Mi Robot Vacuum cleans your surroundings without any manual intervention

Some of the other popular robotic vacuum cleaners are the Dyson 360 eye, Milagrow RedHawk, O-Duster floor cleaner, Samsung POWERbot, Miele Scout, Infinuvo CleanMate, Moneual RYDIS, and bObsweep bObi.

Air Purifiers

Mi Air Purifier 2

Mi Air Purifier 2 automatically cleans and purifies your room in 10 minutes. It performs cleaning of each breath of air using real-time AQI monitoring. The Mi Air Purifier 2 is manufactured in a compact design, which is 40 percent smaller than the first Mi Air Purifier. Moreover, it offers a high 310m³/h Clean Air Delivery Rate (CADR) and will take only 10 minutes to circulate purified air. The Mi Air Purifier has the capacity to purify 400 sq. plinth areas and employs a 360-degree triple-layer filter. The product makes use of air-quality sensors developed by Shinyei and humidity sensors designed by Sensirion AG. You can work with the purifier via the Mi Home app available for Android and iOS. You will be able to switch modes, adjust speed, set timer, detect air quality, filter change alerts including the
