Having a patented communication protocol

wireless smart homes that are cost effective. Some of their offerings include the ability to control electrical appliances from any place in the world, monitoring the energy consumption, integrating with various platforms including IP cameras and monitors.

They, in fact, have a patented communication protocol. Called Cube-R the protocol is claimed to be more suited for the Indian market since it takes up less amount of data and due to its ability to integrate with other protocols.

Home Brain

The company, which is based in Gurgaon comes from the house of Net-World Inc- an IT enable automation consultant. The products in its basket are named Security Brain, Lighting Brain, Entertainment Brain, Climate Brain and Appliance Brain. We reckon the names are self-explanatory regarding the purpose. Aside from helping save energy and water, the

Brainy for the future

firm's various services help increase the life-span of the device, allow you to stay informed about various parameters which would help with timely troubleshooting, reduce or eliminate the requirement for heavy manpower and also ensure safety and security in your home.

With lifestyles evolving and technology matching up, it's probable that the future of home automation would beat our contemporary imagination. And the demands on software that cater to such systems would be of another level. As of now though, you have some pretty good options to pick from, to meet the demands of today, also anticipating at least some of the future needs. **d**
