

Get familiar with development boards like the Raspberry Pi

A word of caution: If you are new to the field of electronics, we advise you to be cautious and wear safety gear to protect yourself.

What do I need to make a home automation system at home?

To make a home automation system you will need some knowledge of electronics and software programming.

Some commonly used electronic components that go into an electronics home automation DIY are:

- Resistors
- Capacitors
- Microcontroller / microprocessor board
- Breadboard
- Relays
- Bluetooth / Wi-Fi module
- Sensors
- Single strand wires
- Software - OpenHAB

Knowledge section

Hardware components

- **Resistors and Capacitors**
 - ♦ Resistors and capacitors are electronic components that help regulate the current and voltage in a circuit.
