

The future is here!

The main sectors of functionality for a smart house are:

1. Security
2. Communications
3. Aesthetics (Lighting, voice control)

And there are more not so obvious areas. There seem to be new developments announced almost daily. On some days it's a new robotic device and on some, it's an artificial intelligence based system. There are a lot of people working around such concepts right now and it is safe to say that there is a huge scope for such innovations to succeed. However, we have only yet seen the tip of the iceberg, and we still have a long way to go to achieve the goal of a fully automated and animated home. So, what lies next in the world of home automation? We shall have a look.

Beautify your home

Smart bulbs or remote controlled bulbs are not a new thing. They have been around for a while now. Finally, now they seem to have hit upon the the correct formula. The Phillips Hue bulb, for example, connects with your phone through an app and lets you decide the colour of the lighting to suit your mood or décor. This eliminates the need for extra lighting. You can basically choose from all possible RGB colours and even set the lighting to give you notifications from your phone. You can even set alarms and set the lights to switch off when you are not at home. Imagine what this means to people with hearing impairment. They can rig the lights to respond to
