

AND THE REST

Everything else that you need to know
before a deep dive

Some say, that learning the basics is the hardest part of learning anything. But if you're done with the previous chapter, you're already done with most of it! In this chapter, we go a bit beyond the basics we have learnt so far and learn more about forms, pipes, routes and navigation and guards. By the end of this chapter, you should be all prepared to dive deeper into each of these and play around a bit on your own. So don't wait anymore, go on!

Forms

Without forms data cannot be entered in the application. Angular1 allowed users to create forms quickly using directive 'NgModel' for binding input element to the data in the \$scope. Angular2 provides a new form module:
