

- `<p>pi (no formatting): {{pi}}</p>`
- `<p>pi (.5-5): {{pi | number:'.5-5'}}</p>`
- `<p>pi (2.10-10): {{pi | number:'2.10-10'}}</p>`
- `<p>pi (.3-3): {{pi | number:'.3-3'}}</p>`
- `export class DecimalPipe {pi: number = 3.1415927;}`

CurrencyPipe

This pipe helps you to format a number into currency using the ISO 4217 standard currency codes, such as “USD” for the US dollar and “EUR” for the euro. The second parameter it takes is `symbolDisplay` whose default value is `false`. As is evident from the parameter name, `symbolDisplay` indicates whether to show the symbol representation of the currency or the code itself i.e. - \$ or USD.

The currency pipe formats a number into currency using ISO 4217 standard currency codes

The third parameter is `digitInfo` which works in the same way as it does in `DecimalPipe`.

- `import {Component, View} from 'angular2/core';`
- `@Component({selector: 'currency-pipe',})`
- `@View({template: ``
- `<h2>Currency Pipe Example</h2>`
