

COMMUNICATION IN ANGULARJS

A deep dive into the \$http service

HTTTP is the primary protocol for browser/server communication. Modern browsers support two *HTTP-based* APIs: XML*HttpRequest* (XHR) and JSONP. The Angular HTTP library simplifies application programming with the XHR and JSONP APIs.

Http communication functionality is provided by *HttpModule* in Angular2, which is a family of services in the Angular HTTP library. The *HttpModule* resides in “@angular/*http*” library and holds providers for a complete set of HTTP services.

The *HttpModule* is not a core Angular module. It's Angular's optional approach to web access and it exists as a separate add-on module called '@
