

over the capsules and includes pads to dampen noise. A better option would be the Blue Yeti.

The Blue Yeti are much more advanced than the Snowball and come with multiple configurations possible. They have three condenser capsules and can go cardioid, bidirectional, omnidirectional and stereo. These are recommended for vocals, musical instruments, podcasting, voiceovers, interviews, field recordings, conference calls. You will find several such microphones on the market for a variety of price ranges. For professional audio, you should look at custom solutions from Sennheiser or Harman Kardon, as they might be able to provide you your signature sound.

Anything that can capture video should do the work

Cameras

To shoot good quality video, you'll need to invest in a good camera. A good camera can even be your smartphone, if it's one of the latest flagships. They do a decent job of recording content for social media and YouTube, but you'll need to invest in a good stabilizer or tripod to get clear, stable video. Most flagships record 4K, but 1080p is good enough for most starters. Make sure you have a good amount of memory in your phone as high quality video recording can consume quite a bit of storage, especially if you decide to shoot in 4K.
