

If you're not going to shoot video at all, but are interested in giving audio commentary over screencasting, you should consider a platform like Twitch or YouTube Gaming, which are good options for someone looking to screencast and record commentary.

For more professional video you can get a compact camera from Sony or Panasonic and other brands and record good videos in 1080p. The microphones on the camera will not be adequate and you'll have to use the audio and video streams separately on software. You can find several compact cameras like the Sony CyberShot series and the Nikon Coolpix. Both of these series are excellent in daylight, but struggle in lower lighting conditions. If you really care about the video quality, you should get adequate lighting or light pads to supplement your existing lighting set up.

Someone more advanced can go for a dedicated DSLR or a handheld video camera. A DSLR will work very well for photography and still video. You can't shoot on the go with these as they won't have good video stabilization. For shooting on the go, you can try the GoPro series, or something less expensive such as the Xiaomi Yi series. The Yi series is built dangerously similar to the GoPros and even share the same accessories so, you'll find that most, if not all GoPro accessories will work with the Yi. The GoPros and the Yi cameras are in

Xiaomi Yi Action camera

a category called action cameras, which are compact cameras for recording POV or similar video for adventure sports and live action sports. These are great for adventure enthusiasts, who want to show off their long bike rides or skillful skateboard tricks, but are not adequate enough to record really good quality. While the flagship GoPro and the Yi come with support for 4K recording, you'll be limited by the amount of control you have over the video. These devices are for quick video recording, by pressing one button and no more steps. They are also built to be resilient, and hence, will at least be water and dust resistant. Some higher priced models of GoPros have
