

accessory kits that even let you shoot underwater video when scuba diving or deep sea diving. They also have head straps and helmet mounts when you want to document that incredible hike or the long road trip.

If you choose to get something more than a compact camera to record your video, you can get a DSLR. A DSLR coupled with good lighting and versatile lighting would be more than sufficient to record good video. Most cameras will record upto 4K and can be directly hooked up to a computer to stream

Canon 5D Mark III

video as well. For someone really serious about making a career out of YouTube, you should be able to invest lakhs of money into equipment and have enough audience to make it back by monetisation.

You can get something like the Canon mark III 5D or similar models from RED. These cameras are for the best of the best professionals, who'll be shooting in

various locations and need high level of control over the recordings. The higher end cameras also come with several accessories, which can make video recording a breeze.

You'll need to invest in a good tripod to keep the camera steady when shooting video. A recommended product is the Joby Gorillapod. These have extensible arms, which can be adjusted to balance the camera on uneven surfaces and shoot from unreachable locations. Alternatively, if you're gonna be shooting a lot of POV videos, you'll need to get a selfie stick or a monopod. For professionals, you can look at the offerings from the drone maker DJI, which has a good monopod called the DJI Osmo Mobile with a stabilizer that reduces shaking to a great extent. These also let you comfortably hold the camera in one hand and reduce shaking.

Other Camera Accessories

With video gear, there are tons of accessories to pick from. There are several lenses you can pick for your camera, such as cine lenses and add filters to block out certain tones or colours. To move the camera around, you can get a slider or a camera rack, which keeps the camera stable as you move. You can also choose between several microphone attachments to cameras and these are good for outdoor recording, especially if you managed to invest
