

Where script becomes a reference for your story, a storyboard is a reference for each of your shots. Storyboard is a set of simple drawings to illustrate all the shots you'd be taking for your video. This is where you visualize what shots would work for your video. Different types of shots and their advantages would be discussed in the next section.

Initially, it is difficult to understand the importance of a storyboard. In fact, it's an arduous job to make one. So if it's your first time making a storyboard, it's fine if you skip thinking about some details. Through the experience of making videos, the storyboarding process would become clearer.

The script and storyboard together help you to also foresee the props, equipment and actors you'll be requiring for the shoot. This allows you to plan your budget.

Now that you have a story and an idea of how to turn it into a video, it's time to make the shoot happen.

## Production

Before you press the record button, you'll have to set up your camera for the shoot. The exact number of camera settings you'll be allowed to change depends on the camera you're using. But there are two settings that need attention and are available to be changed in all modern cameras. Resolution and frame rate. These two are core specifications of a video and it's consid-

Resolution and frame rates should be prioritised first
